FRONTEND DEVELOPER

<https://www.linkedin.com/in/sammar-abbass-11b0b339b/>

Frontend developers play an important role in building websites and applications that are easy to use and visually appealing. They create user interfaces that not only look attractive but also provide a smooth experience for users. A key part of their work is debugging, which involves finding and fixing errors in the code to ensure everything functions correctly. They also focus on writing scalable and maintainable code so that future updates and improvements can be added efficiently. By combining design and functionality, frontend developers help create engaging digital experiences that improve user satisfaction.
